

### Features

- 5.6mm x 3.0mm x 0.77mm SMD LED
- IR-reflow compatible
- Standard Package: 2,000pcs / Reel
- White SMD package with silicone resin
- MSL (Moisture Sensitivity Level): 2a
- RoHS compliant

### Typical Applications

- Entertainment and accent lighting
- Architectural lighting
- Ideal substitute for halogen and florescent lighting
- Automotive interior and exterior lighting
- Specialty lighting (Markers, Beacon, Pathway)

### Package Schematics

#### Notes:

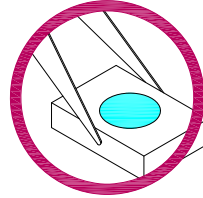

1. All dimensions are in millimeters (inches).
2. Tolerance is  $\pm 0.25(0.01)$  unless otherwise noted.
3. The specifications, characteristics and technical data described in the datasheet are subject to change without prior notice.

### Handling Precautions

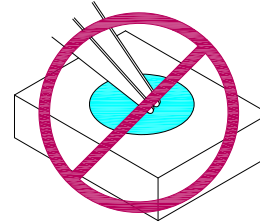

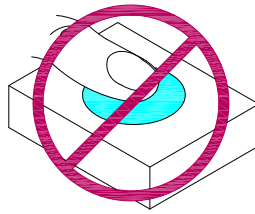

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more susceptible to damage by external mechanical force.

As a result, special handling precautions need to be observed during assembly using silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED.

1. Handle the component along the side surfaces by using forceps or appropriate tools.

2. Do not directly touch or handle the silicone lens surface. It may damage the internal circuitry.

3. Do not stack together assembled PCBs containing exposed LEDs. Impact may scratch the silicone lens or damage the internal circuitry.

- 4.1. The inner diameter of the SMD pickup nozzle should not exceed the size of the LED to prevent air leaks.
- 4.2. A pliable material is suggested for the nozzle tip to avoid scratching or damaging the LED surface during pickup.
- 4.3. The dimensions of the component must be accurately programmed in the pick-and-place machine to insure precise pickup and avoid damage during production.

5. As silicone encapsulation is permeable to gases, some corrosive substances such as H<sub>2</sub>S might corrode silver plating of leadframe. Special care should be taken if an LED with silicone encapsulation is to be used near such substances.

Notes:

1.  $\theta$  1/2 is the angle from optical centerline where the luminous intensity is 1/2 of the optical peak value.
  2. Luminous intensity / luminous flux: +/-15%.
  3. LEDs are binned according to their luminous flux.
- \* Luminous intensity / luminous flux value is in accordance with CIE127-2007 standards.

RELATIVE INTENSITY VS. CIE WAVELENGTH

LED is recommended for reflow soldering and soldering profile is shown below.

Reflow Soldering Profile for SMD Products (Pb-Free Components)

- Notes:
1. Maximum soldering temperature should not exceed 260°C
  2. Recommended reflow temperature: 145°C-260°C
  3. Do not put stress to the epoxy resin during high temperatures conditions

▨ Solder resist

❖ The device has a single mounting surface. The device must be mounted according to the specifications.

0.8mm FR4-Based Boards

For both the open via PTH and filled and capped via design, the finished hole diameter is 0.5mm. A smaller diameter will lead to an increase of thermal resistance. The recommended distance between two holes is 0.4 mm. This results in a minimal pitch of 0.9mm between the vias.
